

Data Addiction

FAST TRACKING DATA MIGRATION

Intro:

When you're migrating data from various sources into Microsoft Dynamics 365, you need data specialists who understand how to deliver **speed, reliability, security and ongoing access to the data**. Unlike other Dynamics 365 providers, we have a **unique methodology and approach** to data migration, which saves you time, money and sets you up to be custodians of your own data - allowing you to fully retire your legacy systems.

50% faster data ingestion
with LakeFlow

Clean data

Quality testing

Traceability

Governance

FAST TRACKING DATA MIGRATION

WHAT MAKES OUR DATA MIGRATION SERVICES DIFFERENT?

Faster: our streamlined LakeFlow solution allows us to consolidate data from all data sources quicker and more efficiently - 50% quicker in fact!

Clean data: duplicate records and anomalies are resolved prior to migration.

Quality testing: we test the data before, during and after data migration occurs for complete transparency.

Traceability: unlike traditional approaches, all data is tracked and managed right back to the original source.

Governance: source data from legacy systems is securely stored for posterity in our datalake where it is categorised and easily accessible multiple purposes, thereby de-risking project go-live.

CASE STUDY: HEALTH SERVICES NOT-FOR-PROFIT

Problem: the need to modernise case management required a full 360-degree view of individual clients, and a consolidation of data from different sources. A complex and outdated legacy system prompted a move to Dynamics 365.

Both the client and the vendor implementing Dynamics 365 were focused on the core product. The client asked Data Addiction to deliver this stream because of our specialisation in data and Dynamics.

“Our biggest challenge was ensuring that we could finally retire our legacy system, without the loss of any historical data. Data Addiction ensured this smooth transition through their innate understanding of data, platforms and processes.” - CEO - Not-For-Profit

Solution: using modern Azure cloud services and our unique IP, we rapidly mapped, consolidated and migrated data to Dynamics 365 from various sources. Historical data was housed in a data estate, so we only brought in relevant data.

Result: a complete transformation of case management in the organisation. Consultants can improve service throughout the customer lifecycle. By keeping historical data in the data lake, hundreds of thousands of dollars in legacy system maintenance costs were saved.
